

DexSpan™ Deck and Railing Systems Compatibility Guide

You have the freedom of choice

To support your unique vision for your deck or dock, DexSpan™ was designed and engineered to provide the most stable framing system for the widest variety of decking and railing systems. The list below represents just a few of the choices you have for creating your ultimate deck.

Composite and PVC Products

Most composite and PVC systems have pre-grooved edges making them ideal for securing with our Slide-and-Hide™ deck fasteners. For boards that do not have a pre-grooved edge, installers can either route and edge into the board to accept our clip or use any of a variety of screws to secure the decking in to our continuous screw race. Installation goes quickly without the need to drill and tap our aluminum framing systems.

DexSpan™ is compatible with (but not limited to):

- Azek Building Products
- EverGrain Composite Decking
- Fiberon Composite Decking
- Lumberock Premium Plastic Decking
- NyloDeck Decking
- TimberTech Composite Decking
- Trex Composite Decking
- TruGrain Decking
- VEKADeck Cellular PVC Decking
- Wolf Decking and Porch

Natural Wood Products

For those that prefer the look and feel of natural wood, DexSpan™ provides the ideal framing system for stability and enhanced performance.

DexSpan™ is compatible with (but not limited to):

- Pressure Treated Lumber
- Cedar
- Redwood
- Ipe Brazilian Walnut (you can buy this with a pre-cut groove)

Pavers and Stone

For those who want their deck to take on the look and durability of a stone or brick patio, Silca Grate systems can be easily attached to our continuous screw race. Self-drilling screw attachments will be needed. Ideal for stone and pavers, DexSpan™ provides a perfectly flat framing system that will not deflect, twist, warp, bow or fail over time. Contact DexSpan™ direct for span charts (22 psf deadload).
